

# Dart Sails & Covers

## Cruising Chute

Option of corporate or personal image painted onto sail

Coloured leech and luff tapes

Option of generous side launch or hooped bag

Option of 'Seal'n'Glide' coating to eliminate water penetration & allow easier hoisting & lowering with a snuffer

Option of spinnaker furler system for easy handling

Option of snuffer for easy handling

Our Cruising Chutes are constructed with a full radial construction. Not only do the panels radiate out of the 3 corners like on a standard tri-radial sail, the centre sections have vertical panels that are 'rocked' to continue the continuous smooth trajectory curve from head to clew / tack. This panel layout allows the thread lines or the fabric to be aligned with the loads imposed on the sail, thus reducing stretch and improves performance and durability.

With improved computer designing, nesting and cutting there is little difference in cloth and assembly efficiency allowing full radial sails at tri-radial prices! Heavier fabric can be used in higher load areas like head and

tack for improved durability and efficiency for larger sails. Our Cruising Chutes are designed to suit the customers' requirements, usually to be easy to trim and stable however more specific requirements can be accommodated.

All spinnakers are custom designed and cut, a personalised colour combination is available. Fabric weight and exact shape depends on size of boat. We also offer personalised images to be painted onto the sail. Price depends on size and complexity. Cruising Chutes and Asymmetric spinnakers can now be used in conjunction with a spinnaker 'Top Down Furler' to make handling even easier. See separate sheet for details.
